

AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows:

Page 11, lines 1-6, please amend the paragraph as follows:

The query icons 208 and 209 ~~207 and 208~~ are used to enter and execute a database query, respectively, to designate which route data to display on Schedule form 201. Icons 210 and 211 ~~209 and 210~~ are used to insert a new route or remove a route respectively. Although not discussed with respect to the other example display screens in Figures 3-9, these icons are also available in the other user interface components and provide similar behavior.

Page 12, lines 16-19, please amend the paragraph as follows:

The Copy button 411 ~~408~~ is used to efficiently copy the route information from one route to another route, which allows the efficient population of data for the template. This button invokes the Copy Route dialog, discussed below with respect to Figure 6.
